Experiment 7

NAME: DEVISHREE J ROLLNO: 240701702

Experiment with different layouts and colour schemes for an app. Collect user feedback on aesthetics and usability.

Aim:
To design a mobile application using different layouts and colour schemes and evaluate user feedback on aesthetics and usability.

Description:
In this experiment, a grocery shopping mobile application named “FreshMart” was designed using Proto.io. Multiple screens such as Login, Home, Cart, and Payment were created to simulate a real-time application.

Different design elements such as layout arrangement, colour schemes, text styles, and buttons were used to enhance the visual appearance of the application. The focus was on creating a simple and user-friendly interface.

User feedback was collected using Google Forms to evaluate the aesthetics and usability of the application. Users were asked to rate each screen and provide suggestions for improvement.

Looks very simple
Nothing

Based on the feedback received, the design was analyzed and minor improvements were identified. This experiment helped in understanding the importance of user interface design, colour selection, and user experience in application development.

Conclusion:

The experiment was successfully completed by designing multiple screens with different layouts and colour schemes. User feedback indicated that simple and clean designs are more effective and user-friendly. The experiment highlights the importance of user-centered design and iterative improvement in developing applications.
