Experiment 8

NAME: DEVISHREE J ROLLNO:240701702

Create storyboards to represent the user flow for your application using Balsamiq

Aim:

To create a storyboard representing the user flow of an application using Balsamiq wireframing tool.

Tools Used:

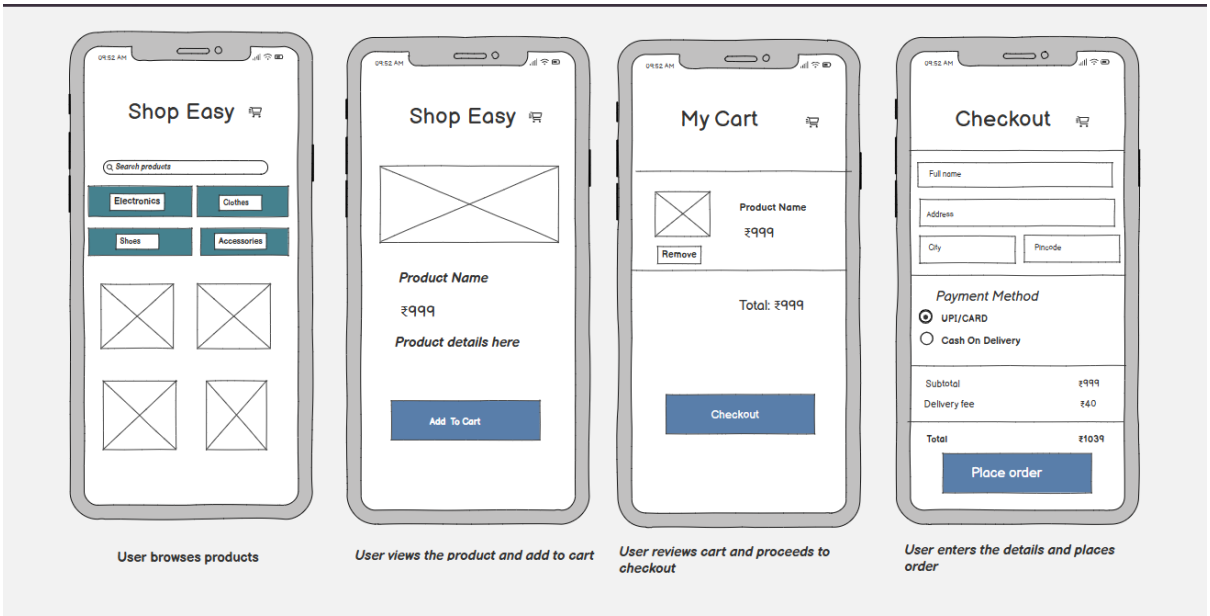
- Balsamiq Wireframes
- Web browser

Description:

A storyboard is a visual representation of the user interaction flow in an application.
In this experiment, a low-fidelity prototype is created using Balsamiq to show how a user navigates through different screens of an online shopping application.

Procedure:

1. Open Balsamiq Wireframes tool
2. Create a new project
3. Add mobile screen frames to the canvas
4. Design the Home screen with search bar, categories, and product images
5. Duplicate the screen and modify it to create Product Details page
6. Create Cart page showing selected items and total price
7. Design Checkout page with address and payment options
8. Arrange all screens sequentially in one canvas
9. Add labels below each screen to describe user actions
10. Export the storyboard as PDF/PNG



Screens Included:

1. **Home Screen** – User browses products
2. **Product Page** – User views product and adds to cart
3. **Cart Page** – User reviews cart and proceeds to checkout
4. **Checkout Page** – User enters details and places order

Result:

The storyboard was successfully created using Balsamiq, representing the complete user flow of an online shopping application.
