EXPERIMENT 6 : PROTOTYPE DESIGN USING AXURE RP

NAME:DEVISHREE J **ROLLNO:240701702**

AIM

To design a prototype for an application using Axure RP and analyze user interface layouts.

OBJECTIVE

To create a simple and interactive prototype for an **Expense Tracker Application** with multiple screens and navigation.

TOOL USED

Axure RP

DESCRIPTION

The Expense Tracker application is designed to help users manage their daily expenses efficiently. The prototype includes multiple screens such as Dashboard, Add Expense, Categories, and Report. Each screen is connected using interactions to simulate real-time navigation.

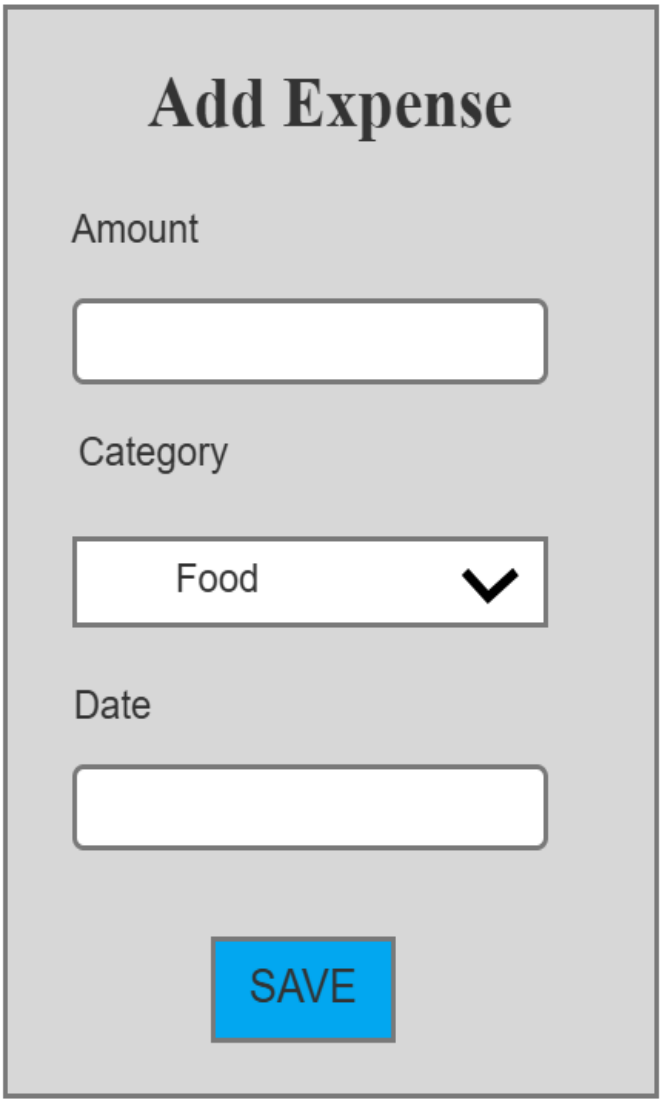
SCREENS DESIGNED

1. Dashboard Screen

The dashboard is the main screen of the application. It displays the title, total expense amount, and options to add a new expense or view reports.

2. Add Expense Screen

This screen allows users to enter expense details such as amount, category, and date. A save button is provided to store the data and return to the dashboard.



3. Categories Screen

This screen displays different expense categories like Food, Travel, and Shopping. It helps in organizing expenses based on type.

4. Report Screen

The report screen shows a summary of expenses including date, category, and amount. It also displays the total expense for analysis.

PROCEDURE

1. Open Axure RP and create a new project.
2. Create multiple pages such as Dashboard, Add Expense, Categories, and Report.
3. Design each screen using basic UI elements like labels, buttons, text fields, and dropdowns.
4. Add interactions to buttons for navigation between pages.
5. Preview the prototype to verify functionality.
6. Capture screenshots of all screens.
7. Insert the screenshots into the Word document.

RESULT

A working prototype of an Expense Tracker application was successfully designed using Axure RP with proper navigation between all screens.

CONCLUSION

The experiment helped in understanding how to design user interfaces and create interactive prototypes using Axure RP. It also provided knowledge about layout design and navigation flow in applications.
