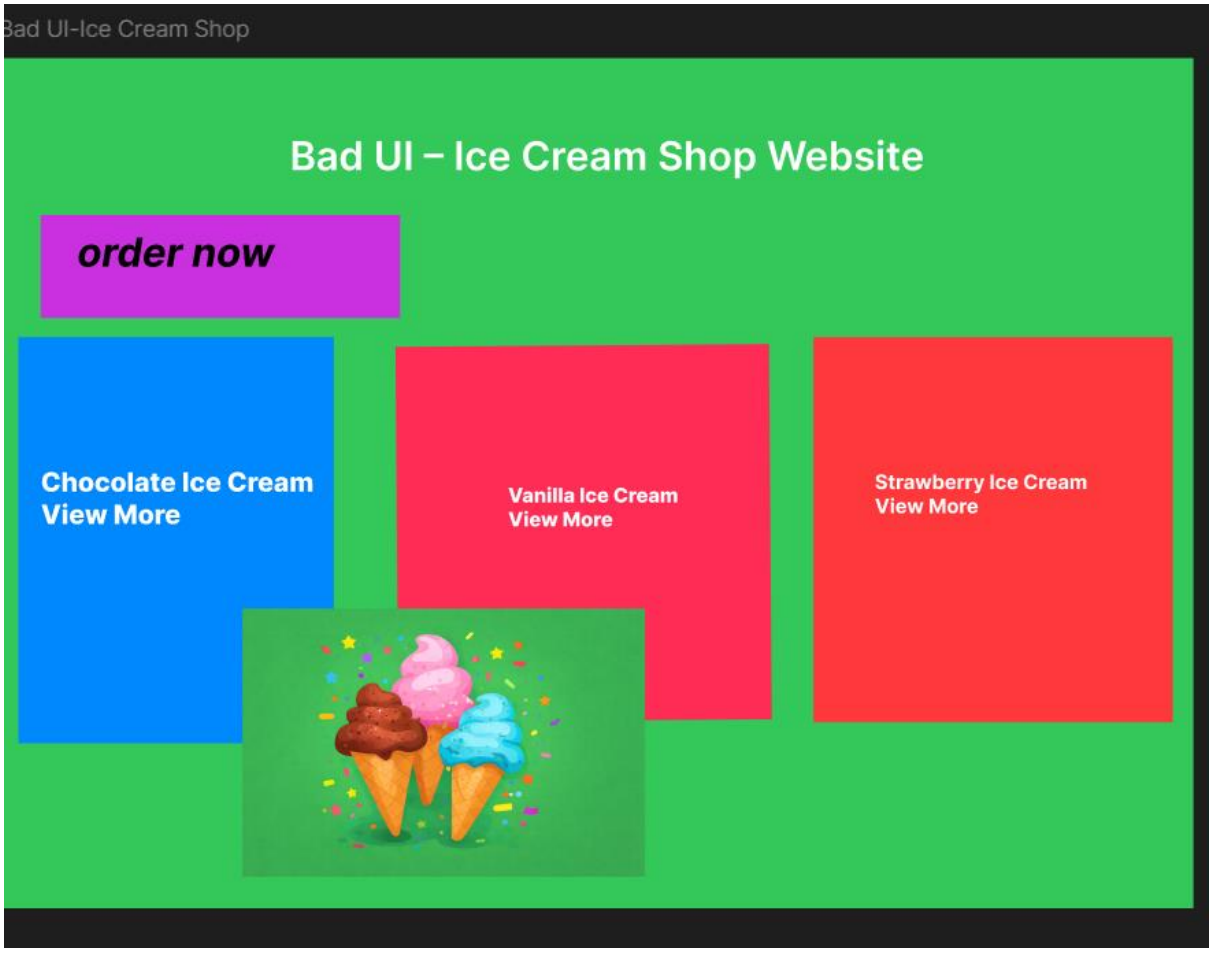
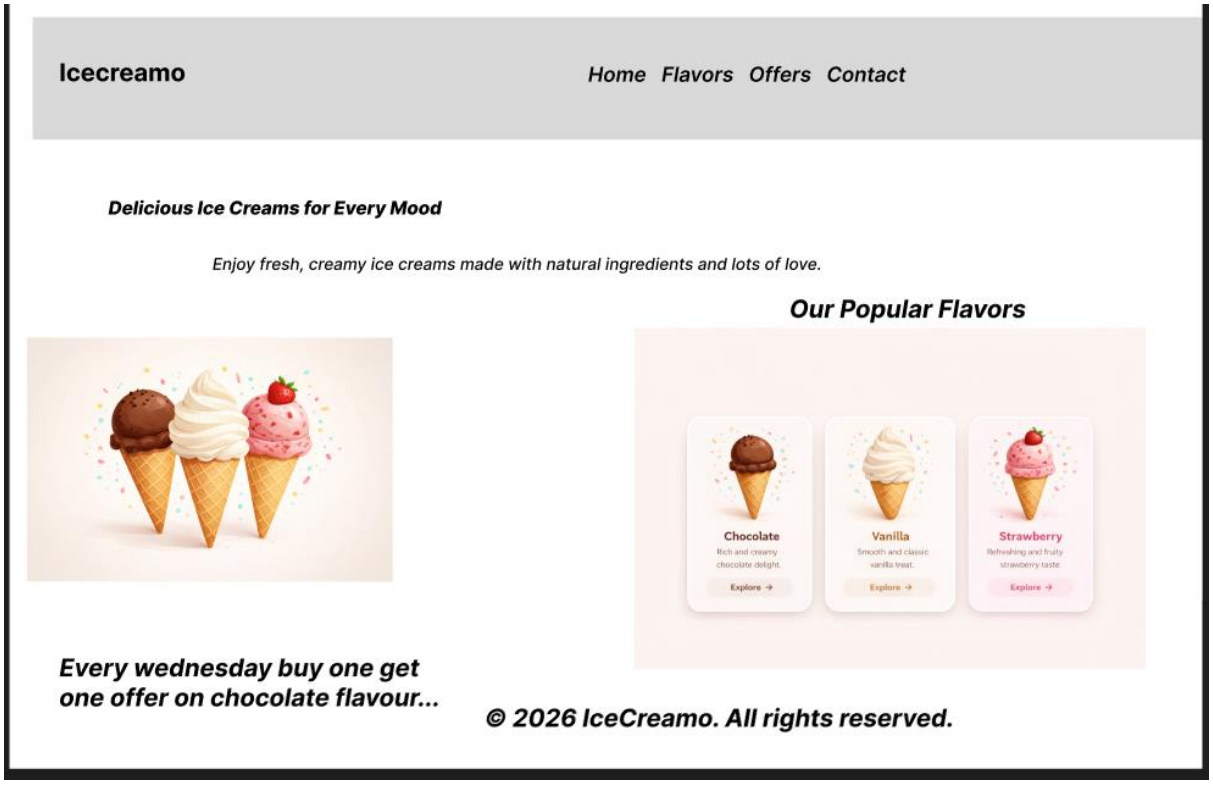
USER INTERFACE AND DESIGN

COMAPARSION OF UI DESIGN BETWEEN TWO FIGMA CREATION

BAD WEBSITE:



GOOD WEBSITE:



PROTOTYPE LINK:
https://www.figma.com/proto/dhuVESt5zxeyRmNIfAWqaE/Untitled?page-id=0%3A1&node-id=1-2&p=f&viewport=168%2C25%2C0.18&t=GH2vMYLXUU2cd3oz-1&scaling=contain&content-scaling=fixed&starting-point-node-id=1%3A2

System Chosen: **Ice Cream Shop Website**
The two websites have distinct designs and approaches. Here's a comparison:
BAD UI – Ice Cream Shop Website

1. Design Style:

- Uses **very bright and clashing colors** (green background with red, blue, pink blocks).

- No consistency in color usage or visual theme.
- Layout looks **crowded and unbalanced**.

2. Content:

- Ice cream items are shown only as **plain colored rectangles** instead of real images.
- Text is randomly placed and not visually appealing.
- Important buttons like **"Order Now"** are not clearly highlighted.

3. Navigation:

- No proper navigation bar.
- Users cannot easily understand where to click or what to do next.
- Poor visual hierarchy makes the interface confusing.

4. Usability Issues:

- Poor alignment and spacing between elements.
- Lack of hierarchy makes it difficult to focus on important content.
- Overall design feels unprofessional and unattractive.

Conclusion (Bad UI):
The bad design fails to reflect a real ice cream website experience. It confuses users and does not encourage interaction or trust.

GOOD UI – Ice Cream Shop Website

1. Design Style:

- Uses a **clean, minimal, and modern layout**.
- Soft colors and white background improve readability.
- Consistent theme that matches an ice cream brand.

2. Content:

- Uses **real ice cream images** for better visual appeal.
- Includes meaningful headings like *"Delicious Ice Creams for Every Mood"*.
- Flavor cards (Chocolate, Vanilla, Strawberry) are clearly designed.

3. Navigation:

- A **clear navigation bar** with options: Home, Flavors, Offers, Contact.
- Users can easily move through the website.
- Proper alignment improves user flow.

4. Interactivity & Usability:

- "Order Now" button is clearly visible and clickable.
- Prototype navigation connects **Bad UI** → **Good UI**, showing improvement.
- Smooth layout guides the user's attention naturally.

5. Overall Experience:

- Visually attractive and professional.
- Builds trust and encourages users to explore and order.
- Follows proper UI/UX principles like hierarchy, spacing, and consistency.

Conclusion (Good UI):
The good design solves all problems of the bad UI by improving navigation, visual appeal, usability, and user experience.

Key Differences Between Bad UI and Good UI

- **Focus:**
  - Bad UI is random and confusing
  - Good UI is user-friendly and structured
- **Design Aesthetics:**
  - Bad UI uses harsh colors and poor layout
  - Good UI uses clean design and attractive visuals
- **Content Presentation:**
  - Bad UI lacks real images and hierarchy
  - Good UI uses images, cards, and proper headings
- **User Experience:**
  - Bad UI frustrates users

- Good UI engages users and improves interaction
